dd then **P** - cut line then paste before cursor line

How to Map Keyboard Shortcuts in Vim

In the mapping section we will add shortcuts to making typing longer commands easier. This will save you key strokes and lots of time, especially for long commands.

Key mapping syntax is like this:

```
map_mode <what_you_type> <what_is_executed>
```

Popular Mapping Modes in Vim

Here are a few popular mapping modes and probably the most useful and important.

```
noremap – Allows you to map keys in normal mode.
inoremap – Allows you to map keys in insert mode.
vnoremap – Allows you to map keys in visual mode.
```
