How to Map Keyboard Shortcuts in Vim

In the mapping section we will add shortcuts to making typing longer commands easier. This will save you key strokes and lots of time, especially for long commands.

Key mapping syntax is like this:

map_mode <what_you_type> <what_is_executed>

Popular Mapping Modes in Vim

Here are a few popular mapping modes and probably the most useful and important.

nnoremap - Allows you to map keys in normal mode. inoremap - Allows you to map keys in insert mode. vnoremap - Allows you to map keys in visual mode.

Comment out Multiple Lines

- 1. Navigate to the line you wish to start commenting out.
- 2. Press the **Ctrl + V** keys to enable visual mode.
- 3. Select all the lines you wish to comment out using the **up** and **down** arrow keys or the letters **k**

and **j**.

- 4. Vim will insert a highlight at each line's beginning to indicate the selected line
- 5. With the target lines selected, press **Shift + I** to enter insert mode.
- 6. Enter the comment symbol for the target file. In this case, must insert the pound (#) symbol to comment Python code.
- 7. Press the ESC key, and Vim will comment out all the selected lines.

Uncomment Multiple Lines

- 1. Start by navigating to the line you wish to uncomment, then press **Ctrl + V** to activate the visual block mode.
- 2. Select all the lines you want to uncomment using the **up** and **down** arrow keys or the letters **k** and **j**.
- 3. Once your lines are selected, press the **X** key to remove the comments.

~		:	Changes the case of current character
